

# David Cela Pedraza

Place of birth: Málaga, Spain | Phone: (+34)681934135 | Email address: [davidcelapedraza@gmail.com](mailto:davidcelapedraza@gmail.com)

## About me

From an early age, I have been interested in information technology. During my studies, I discovered DevOps, which quickly became my main professional focus. As a DevOps/Platform Engineer, I specialize in Cloud Engineering, focusing on designing scalable, highly available architectures aligned with the AWS Well-Architected Framework. I approach infrastructure with a strict "Security First" mindset, implementing robust IAM roles and baseline security measures from day zero.

With hands-on experience in AWS, Infrastructure as Code (Terraform), container orchestration (Kubernetes, Docker), and deploying distributed Python-based applications, I work well in Agile team environments, adapt quickly to new technologies, and actively look for effective and innovative solutions.

## Skills

- Cloud Architecture & IaC: AWS (Well-Architected Framework), Terraform, Helm, Azure, GCP.
- Containers & Orchestration: Docker, Kubernetes, ECS Fargate.
- Programming & Scripting: Python, Go, Bash, PowerShell.
- CI/CD & Version Control: Git, GitHub, GitHub Actions, CodeCommit, Jira, Agile / Scrum.
- DevSecOps & Identity: IAM Roles design, Checkov, Trivy, Vault, Keycloak, OIDC, AWS WAF, KMS.
- Observability & Logging: Grafana, Prometheus, OpenTelemetry, LGTM Stack, OpenSearch.
- Databases & AI Integration: Apache Kafka, PostgreSQL, pgvector, Pinecone.

## Work experience

**DevOps Engineer** | Convotis | October 2025 - Current | Malaga, Spain

Designing and maintaining robust multi-cloud infrastructure for enterprise-grade, event-driven platforms:

- Cloud Architecture & Security First: Making core architectural decisions focused on the AWS Well-Architected Framework. Implementing a 'Security First' approach from day zero, designing strict least-privilege IAM roles, data-at-rest encryption (KMS), and advanced WAF configurations.
- Cloud Infrastructure & IaC: Provisioning and managing highly available architectures on AWS using Terraform. Managing containerized services (ECS Fargate) and relational databases with vector extensions.
- Platform & Python Ecosystem: Deploying and scaling runtimes for distributed Python-based asynchronous agents and state-machine orchestrators over managed Apache Kafka.
- DevSecOps & CI/CD: Architecting automated GitHub Actions pipelines integrated with automated testing, IaC analysis, vulnerability scanning, and custom self-hosted runners to optimize deployment workflows.
- Full-Stack Observability: Deploying enterprise observability stacks (LGTM) utilizing OpenTelemetry and Grafana for end-to-end monitoring.

**SRE Internship** | Freepik | March 2025 - June 2025 | Malaga, Spain

- Developing and monitoring operational platforms and took ownership of reliability-focused tasks. During this experience, I automated workflows, deployed microservices on Kubernetes, and implemented monitoring, logging, and CI/CD pipelines.
- [ExpressOps](#) : Lightweight flow orchestrator to automate repetitive \_Ops tasks.

## Education & Training

**Higher Technical Degree in Networked Computer Systems Administration** | Bezmiliana | 2023 - 2025 | Malaga, Spain

**Technological Bachelor's Degree** | Margarita Salas | 2021 - 2023 | Malaga, Spain

## Certifications that may be of your interest

**AWS Academy Graduate – Cloud Architecting // Well-Architected Proficient // Generative AI Practitioner // Cloud Practitioner - Training Badge ...**

Amazon Web Services Training and Certification

**CCNA: Switching, Routing, and Wireless Essentials / Cyber Threat Management / Enterprise Networking, Security, and Automation (etc)**  
- Cisco

**Google Cybersecurity Professional Certificate (V2)**

## Language

**Spanish** - Native

**English** - C1 Level [fluent]
